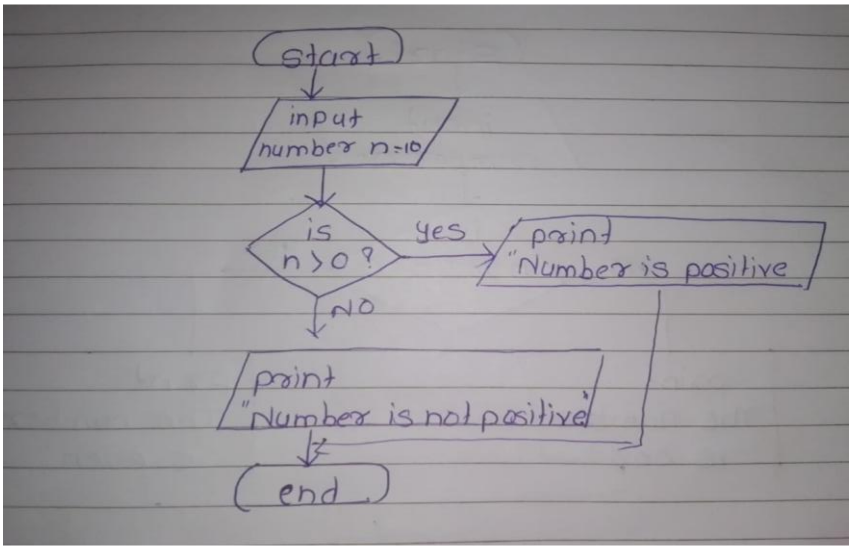
Assignment 1

1. Check Positive Number:

FLOWCHART:



```
public class PositiveNumber{
    public static void main(String args[]){
        int n=10;
        if(n>0){
            System.out.println("Number is positive");
        }else{
            System.out.println("Number is not positive");
    }}}k Positive Number:
```

OUTPUT:

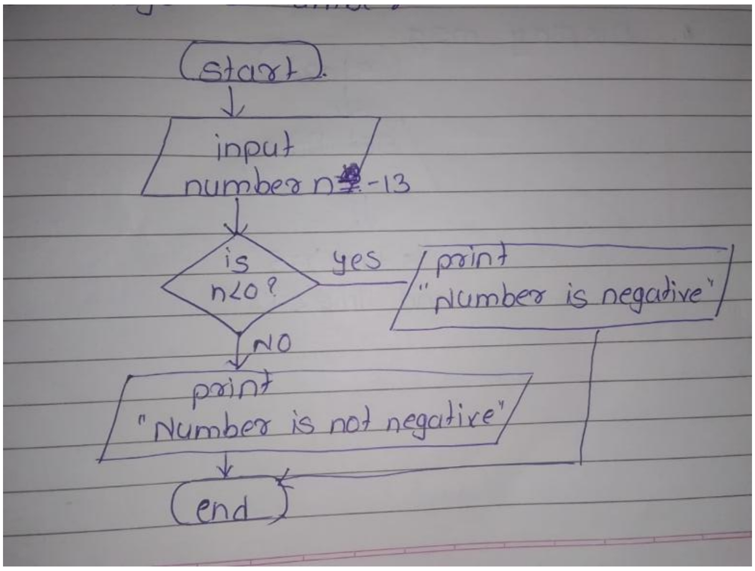
C:\Users\PRANALI\Desktop\logic_building_code>javac PositiveNumber.java

C:\Users\PRANALI\Desktop\logic_building_code>java PositiveNumber

Number is positive

2. Check Negative Number:

FLOWCHART:



```
import java.util.Scanner;

public class NegativeNum{

public static void main(String args[]){

        int n= -13;

        if(n<0){

                System.out.println("Number is negative");

        }else{

                System.out.println("Number is not negative");

        }}}
```

OUTPUT:

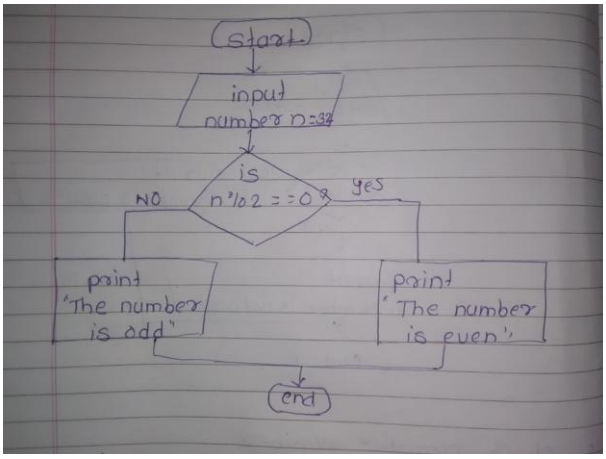
C:\Users\PRANALI\Desktop\logic_building_code>javac NegativeNum.java

C:\Users\PRANALI\Desktop\logic_building_code>java NegativeNum

Number is negative

3. Check Odd or Even Number:

FLOWCHART:



public class OddEven{

public static void main(String args[]){

int n=32;

if(n%2==0){

System.out.println("The number is even");

}else{

System.out.println("The number is odd");

}}}

OUTPUT:

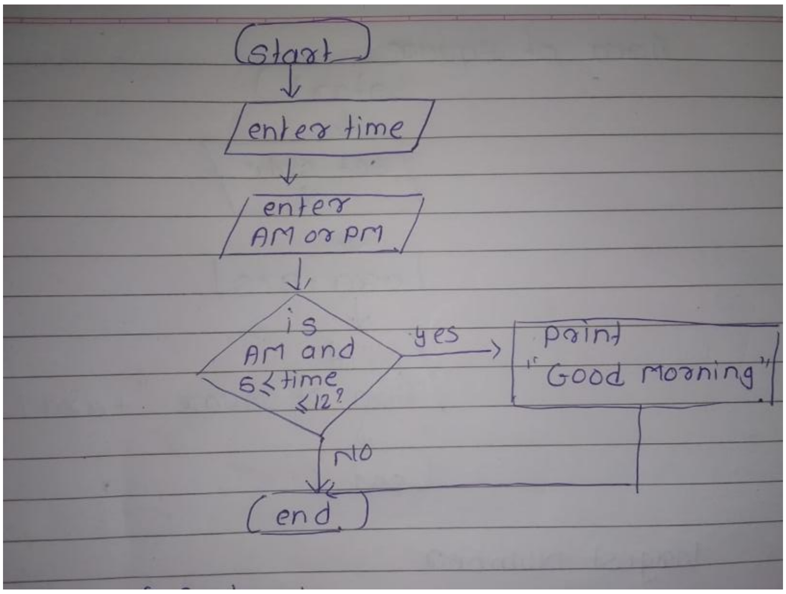
C:\Users\PRANALI\Desktop\logic_building_code>javac OddEven.java

C:\Users\PRANALI\Desktop\logic_building_code>java OddEven

The number is even

4. Display Good Morning Message Based on Time:

FLOWCHART:



```
import java.util.Scanner;

public class GoodMorning {

    public static void main(String args[]) {

        Scanner sc = new Scanner(System.in);

        System.out.println("Enter time:");

        int time = sc.nextInt();

        System.out.println("Enter AM or PM:");

        String ampm = sc.next();

        if (ampm.equals("AM") && time >= 5 && time <= 12) {

            System.out.println("Good Morning");

        }}}
```

OUTPUT:

C:\Users\PRANALI\Desktop\logic_building_code>javac GoodMorning.java

C:\Users\PRANALI\Desktop\logic_building_code>java GoodMorning

Enter time:

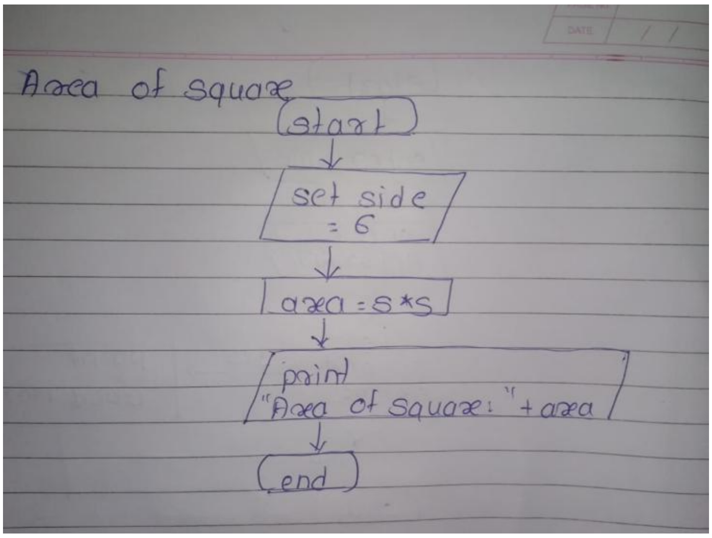
7

Enter AM or PM:

PM

5. Print Area of a Square:

FLOWCHART:



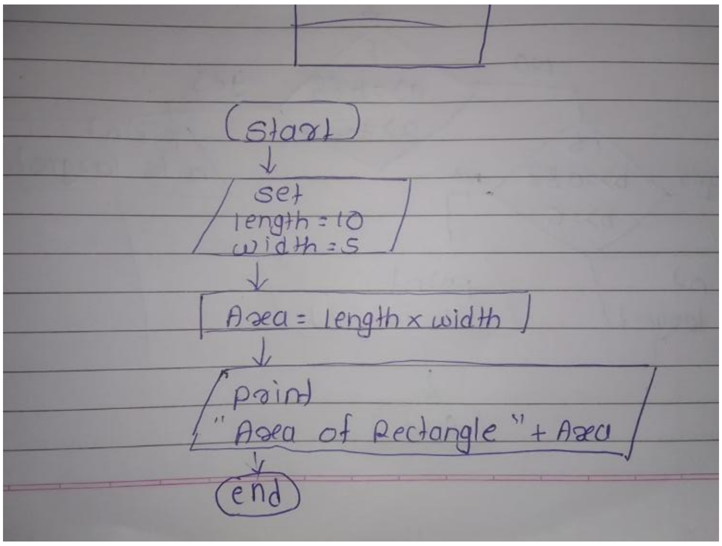
```
public class AreaSquare{
        public static void main(String args[]){
        int s=6;
        int Area=s*s;
        System.out.println("Area of Square: " +Area);
        }}
```

OUTPUT:

```
C:\Users\PRANALI\Desktop\logic_building_code>javac AreaSquare.java
C:\Users\PRANALI\Desktop\logic_building_code>java AreaSquare
Area of Square: 36
```

6. Print Area of a Rectangle:

FLOWCHART:



```java
public class AreaRectangle {

    public static void main(String args[]) {

        int length = 10;

        int width = 5;

        int Area = length * width;

        System.out.println("Area of Rectangle: " + Area);

    }

}
```

OUTPUT:

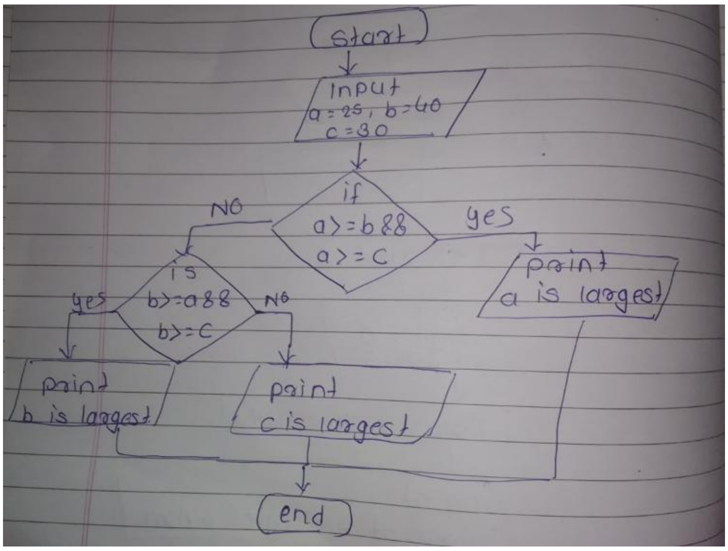
C:\Users\PRANALI\Desktop\logic_building_code>javac AreaRectangle.java

C:\Users\PRANALI\Desktop\logic_building_code>java AreaRectangle

Area of Rectangle: 50

7. Find the Largest of Three Numbers:

FLOWCHART:



```
public class LargestNumber {
   public static void main(String args[]) {
      int a = 25;
      int b = 40;
      int c = 30;
      if (a >= b && a >= c) {
         System.out.println("Largest number is: " + a);}
      else if (b >= a && b >= c) {
         System.out.println("Largest number is: " + b);}
      else {
         System.out.println("Largest number is: " + c);
      }}}
```

OUTPUT:

```
C:\Users\PRANALI\Desktop\logic_building_code>javac LargestNumber.java
C:\Users\PRANALI\Desktop\logic_building_code>java LargestNumber
Largest number is: 40
```
